1. The following is an examiner's statement of reasons for allowance: In regard to claims 1, 4 and 25 that are now amended to be product by process claims. The German and Baxter et al. references do not teach the structure of predominantly planar side surfaces for the monolithic valve body as are now claimed. In addition to the predominantly planar side surfaces for the monolithic valve body, the claims also define the valve body seat to be circular. In addition to the predominantly planar side surfaces for the monolithic valve body disclosed in Stroop, the Stroop reference also clearly shows a polygonal valve body seat in the figures (note the shading differences between the unshaded left side and the shaded right side of the valve body seat along the 2—2 cutoff line in figure 1. It is noted that polygonal valve body seats are often used in order to allow the valve body to be easily gripped and tightened with a wrench). One of ordinary skill in the art would not consider it obvious to start with a round bar stock as is now claimed, then form that round bar stock into a polygonal valve seat as is disclosed in Stroop and then to further modify Stroop to once again have a circular valve seat in view of Baxter and as called for in claims 1, 4 and 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
